

WHAT ARKANSAS BUSINESS CAN PROVIDE THE POWER AND COMMUNICATIONS TO CONNECT THOUSANDS OF LOCATIONS TO THE INTERNET?

When the Little Rock School District wanted to connect 25,000 classroom network ports to the Internet, they were smart. They chose IK Electric.

IK designed, provided and installed a complete **CISCO SYSTEMS** secure network to converge voice, video and integrated data district wide.

In addition, IK built wireless networks where necessary and installed over a thousand miles of cabling throughout 60 facilities. On top of all of this, IK performed the electrical work to power it all up.

The Little Rock School District's network is manageable from a single location and provides students with instant access to learning tools and instructional databases over the Internet.

Imagine what can IK can do for you?
